Fab City Hubs Toolkit

If you are starting or strengthening a Fab City Hub, this is your field guide. The Hubs Toolkit walks you through the real steps behind building a local production ecosystem, from mapping stakeholders and resources to activating pilots and governance structures. It connects strategy with hands-on experimentation, showing how hubs become …

Fab City Operating System

The Fab City Operating System is a digital backbone beta-test of our distributed network. It enables makers, innovators, and communities to share projects, document processes, and collaborate across territories. More than a platform, it is infrastructure for learning by doing, where open source hardware, shared knowledge, and local production are …

Full Stack Imp. Guide

The 2054 vision is ambitious. The Full Stack Implementation Guide breaks it down into something you can actually work with. It shows how to map local resources, activate communities, prototype solutions, and rethink supply chains through the Fab City Full Stack approach. This is where vision turns into action, layer by layer, territory by territory.
